

Name: \_\_\_\_\_

1. (1 pt.)

- **Read all material carefully.**
- *If in doubt whether something is allowed, ask, don't assume.*
- You may refer to your books, papers, and notes during this test.
- E-books may be used *subject to the restrictions* noted in class.
- Computers are not permitted, except when used strictly as e-books.
- Network access of any kind (cell, voice, text, data, ...) is not permitted.
- Write, and draw, carefully. Ambiguous or cryptic answers receive zero credit.
- Use class and textbook conventions for notation, algorithmic options, etc.

Write your name in the space provided above.

|                                                           |
|-----------------------------------------------------------|
| WAIT UNTIL INSTRUCTED TO CONTINUE TO REMAINING QUESTIONS. |
|-----------------------------------------------------------|

Do not write in the following table.

| Q     | Full Score |
|-------|------------|
| 1     | 1          |
| 2     | 20         |
| 3     | 24         |
| 4     | 25         |
| total | 70         |

2. (20 pts.) Trace the operation of MST-PRIM on the following graph using the conventions of Figure 23.5 (p. 635) of the textbook. In particular, after **each iteration** of the while loop:

- mark **vertices belonging to the tree** using a check mark;
- highlight **edges belonging to the tree**  $A$  using double-lines; and
- draw an arrow pointing to the **vertex  $u$  that was removed from  $Q$  in that iteration**.

[additional space for answering the earlier question]

3. (24 pts.) Trace the operation of  $\text{DFS-VISIT}(G, A)$ , for the following directed graph  $G$  using the conventions of Figure 22.4 (p. 605) of the textbook. In particular:

- Depict the state of the graph after each iteration of the for loop.
- Annotate each vertex with its color: **White**, **Gray**, **Black**.
- Record the discovery and finishing times in the format  $d/f$ .
- Highlight tree edges using double lines, and annotate **Forward**, **Backward**, and **Cross** edges.

[additional space for answering the earlier question]

4. (25 pts.) Trace the operation of the FLOYD-WARSHALL algorithm on the following graph, using the conventions of Figure 25.4 (p. 696) of the textbook. (You may use the  $\cdot$  symbol instead of  $\infty$  within the matrices.)

[additional space for answering the earlier question]
